

Your digital transport  
procurement is in good hands!

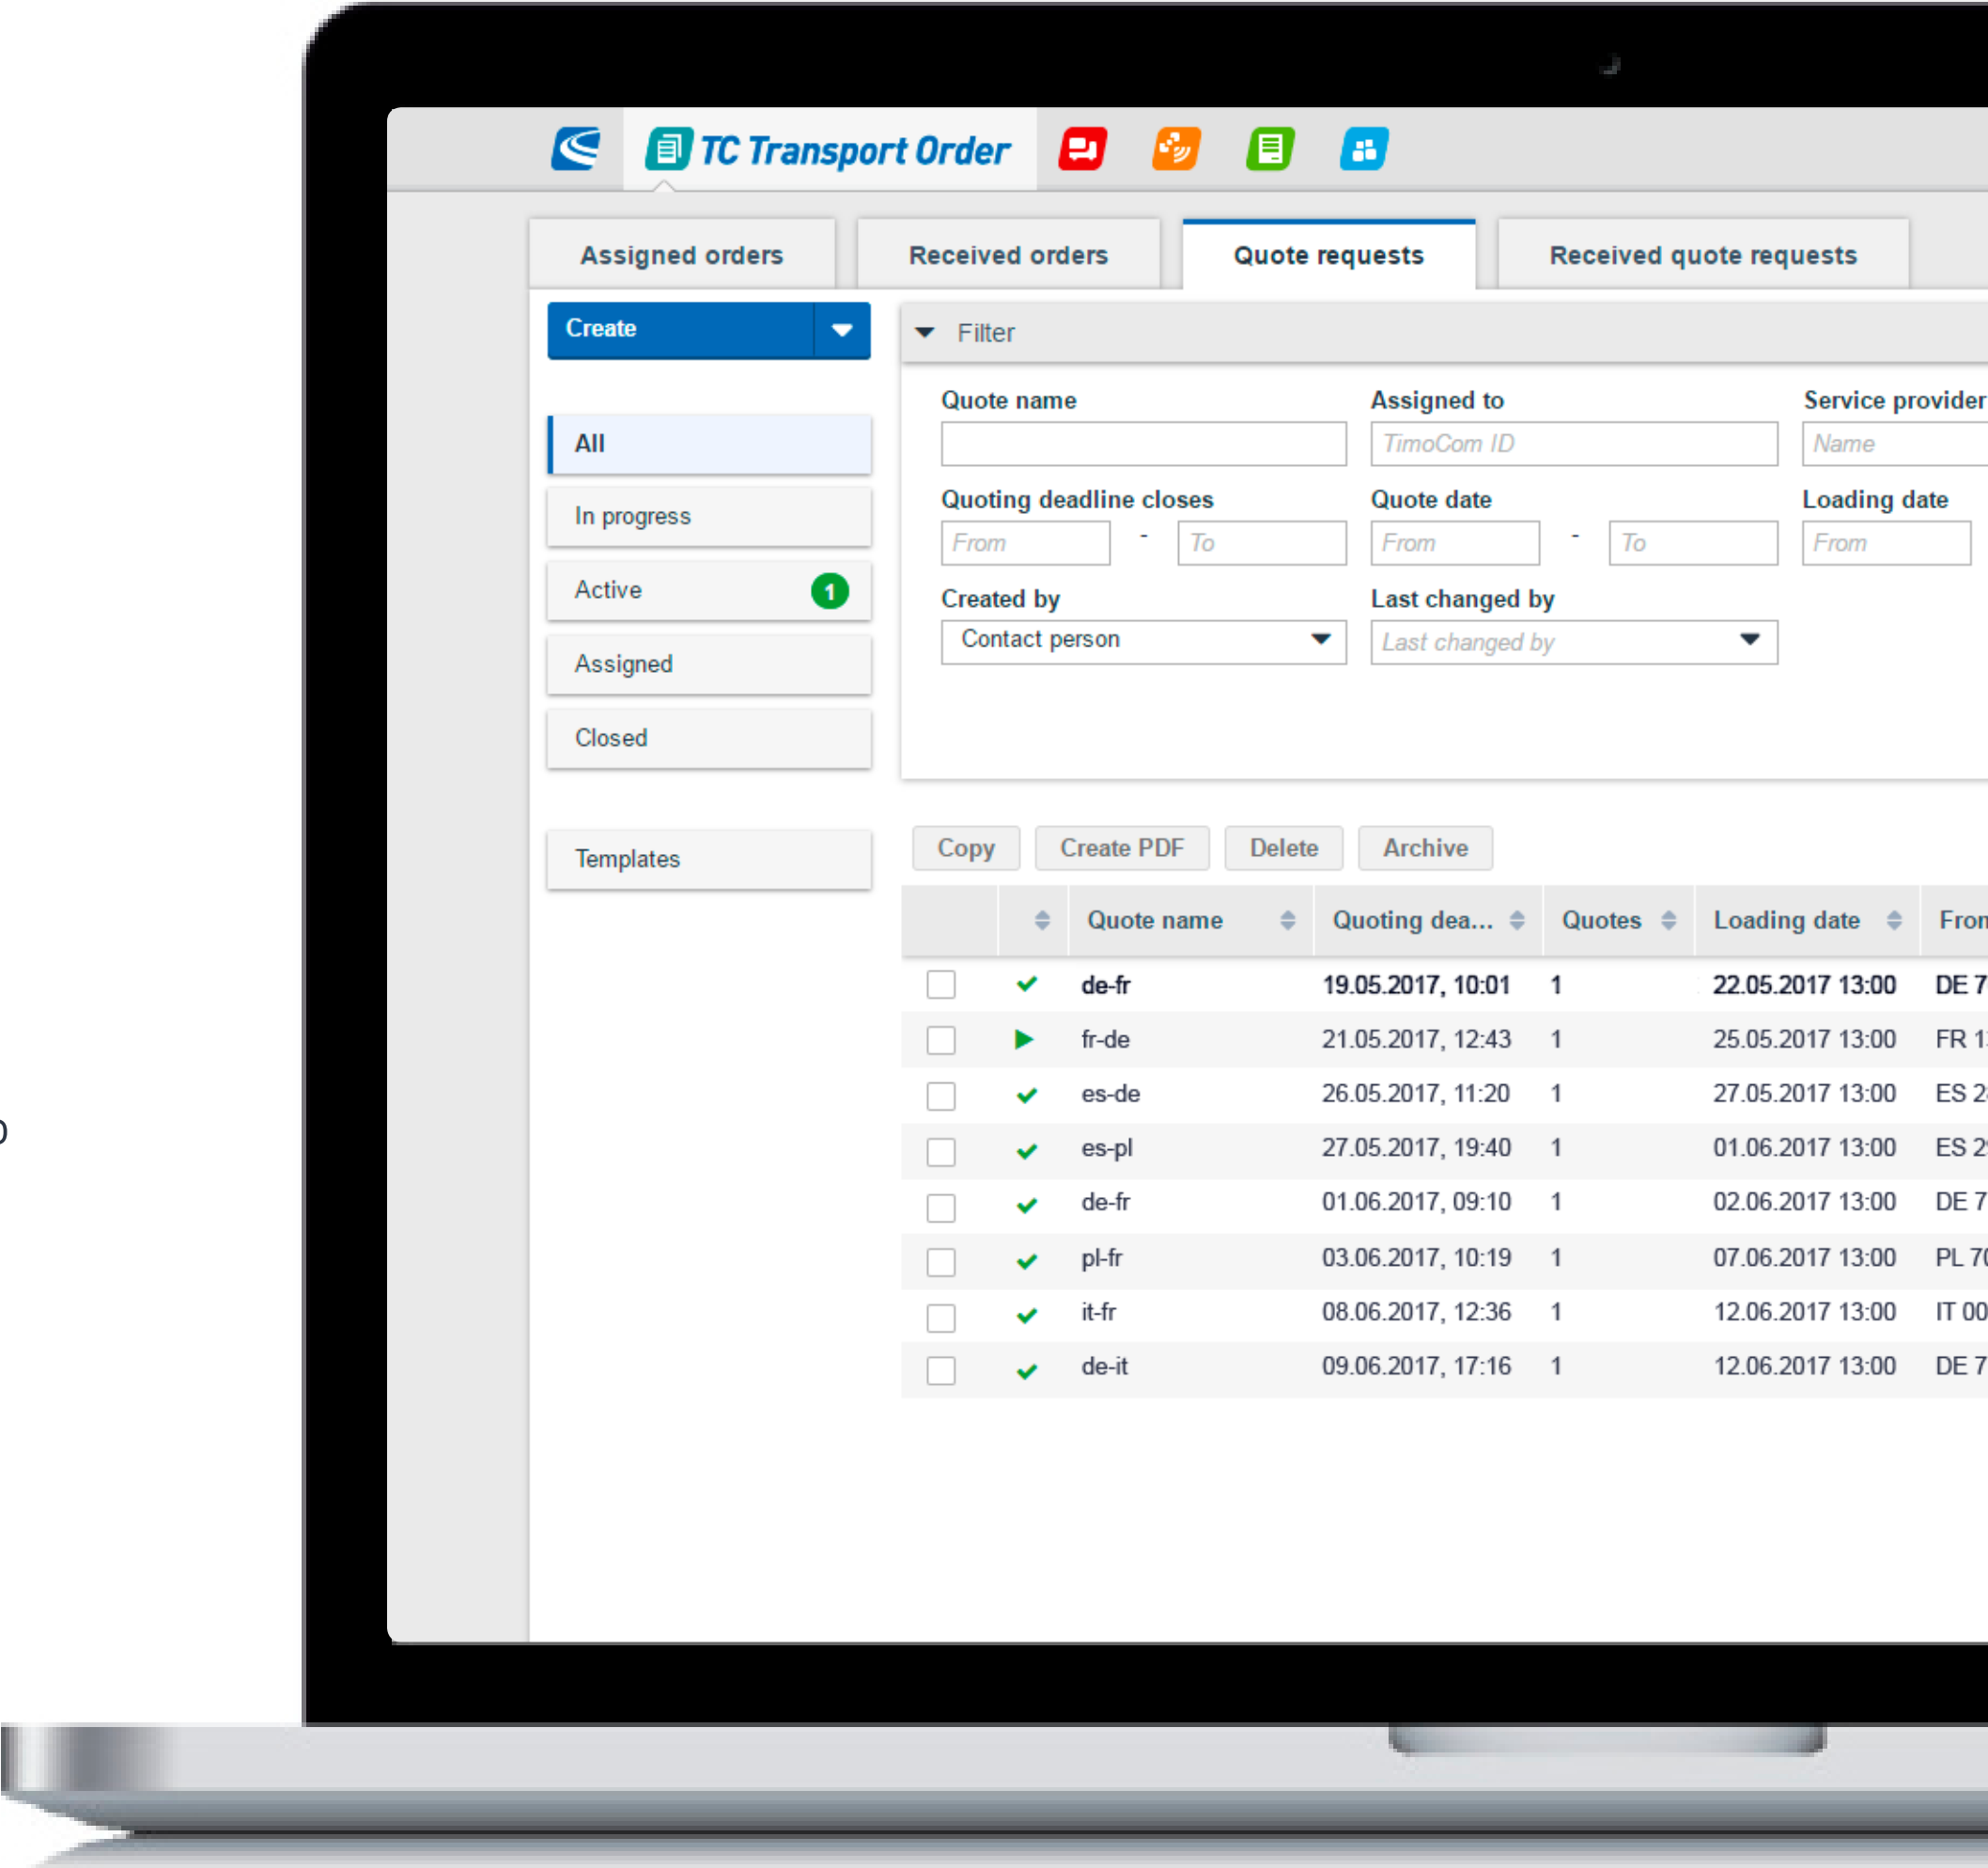

### **Your digital transport procurement is in good hands!**

You need the right service provider quickly and want to process transport orders without media discontinuity or errors? TimoCom, the digital transport platform, makes it possible for you to react flexibly and agilely to new market requirements and to request exclusive transport from preferred service providers. You then assign the transport order to your business partner digitally within the platform, maintaining full control.

- Request transport quotes simultaneously from several service providers
- Receive a variety of up to date price information in real time
- Compare offers and select the best
- Assign transport requests digitally to selected business partners

# Request quotes digitally

# This is how digital transport service purchasing works

Create a transport quote request with all the important information.

Ask up to 50 of your business partners simultaneously for a quote.

Compare the price offers and choose the best service provider. With a click you decline all other service providers' offers.

A transport order is automatically created containing all the information in the transport order request and is sent to your service provider.

When the service provider accepts the transport order, a mutually binding legal contract is established.

The transport order is centrally stored or archived by you.

# Your additional benefits at a glance

Completely digital order agreements

Prevention of media discontinuity and error sources

Central overview of all operations and their status

Time saving templates for repetitive transport requests

Receive notifications on relevant operations

Binding contracts

Drive your company towards the future with TimoCom,  
and process transport procurement digitally.

TimoCom's  **Update Pool** demonstrates optimal  
TC Transport Order® usage.
