

Optimise your business processes!

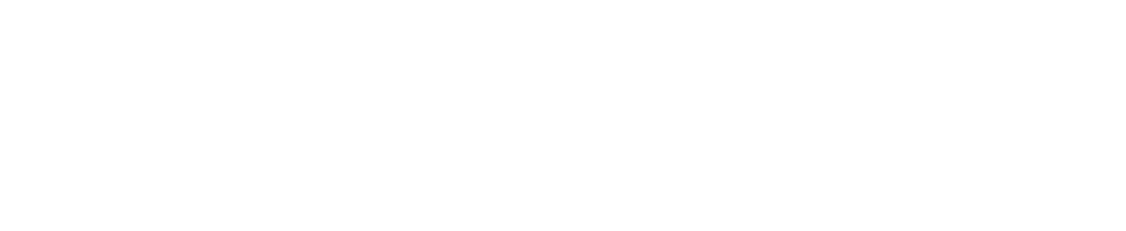

Optimise your business processes

Is organising your transport orders cumbersome, with many emails back and forth, telephone calls and too much paperwork? TimoCom, the digital transport platform, offers you the opportunity to manage your transport orders digitally, with simple central processing via the platform. Not only that, you have a greater chance of finding additional business by submitting your quote for exclusive transport requests.

Order handling

Assigned orders

Digitally assign transport orders quickly and easily to your business partner, which saves you valuable time and processing costs.

This is how digital transport transactions work

You receive a transport quote request from one of your business contacts.

You submit your price offer, which only that business partner can see.

If your business partner selects your offer, you will receive the corresponding transport order. If your offer is not selected, you will be notified automatically.

With a click you accept the transport order and a mutually binding legal contract is established.

The transport order is centrally stored or archived by you.

Your benefits at a glance

Central overview of all operations and their status

Prevention of media discontinuity and error sources

Transport orders with the company logo, documents and a personalised order number generator

Time saving templates for repetitive transport requests

Strict confidentiality of data and information

Binding contracts

Simplify your daily work load by processing transport orders digitally!

TimoCom's **Update Pool** demonstrates optimal
TC Transport Order® usage.
